Combined Science - Chemistry Key Stage 4 Curriculum 2023/24

	Topic/Big Question	Focus
Year 10	Earth systems interact	The Earth's Atmosphere - Students will learn the history and evolving nature of our atmosphere and how the climate is changing and the effect of atmospheric pollutants on our lives.
	Structure determines properties	Structure and bonding - Students will learn how atoms bond together to make compounds, including ionic, covalent and metallic structures. They will learn what makes up fullerene and graphene and what nanoparticles are and some applications of them.
	Reactions rearrange matter	Chemical Calculations - Students will learn how to calculate relative formula mass and what a mole is and how to use it for calculations. They will look at what is meant by atom economy and how to calculate titrations, volumes of gases and how to express concentrations in chemistry.
	Reactions rearrange matter	Electrolysis - Students will learn how the process of electrolysis works both in molten and solutions and how aluminium is extracted by this method.
	Reactions rearrange matter	Energy Changes - Students will learn about endothermic and exothermic reactions, what a reaction profile is and how to calculate bond energies and about chemical and fuel cells.
	Reactions rearrange matter	Rate of Reactions - Students will learn how temperature, concentration and catalysts affect the rate of a chemical reaction and what is meant by reversible reactions and dynamic equilibrium.

	Topic/Big Question	Focus
Year 11	Reactions rearrange matter	Rate of Reactions - Students will learn how temperature, concentration and catalysts affect the rate of a chemical reaction and what is meant by reversible reactions and dynamic equilibrium.
	Structure determines properties	Crude Oil and Fuels - Students will learn about hydrocarbons and how they are extracted from oil by fractional distillation.
	Reactions rearrange matter	Chemical Analysis - Students will learn about what is meant by a pure substance, what the principle of chromatography is and how to test for gases, positive and negative ions.
	Earth systems interact	The Earth's Resources - Students will learn about finite and renewable resources, how we get water that is safe to drink, how we treat wastewater, how we extract metals from ores and what a life cycle assessment is.
